

UNOLS Fleet Utilization and Projections (2000 - 2020)

* Only new construction with funds identified have been included in the total.

Global Ship Utilization and Projections

Ships needed in 2020:

1 ship = 300 operating days

= existing ship

= new construction (Seismic* vessel)

= ship needed to meet demand

* Seismic ship demand is expected to increase, this will make less time available for general purpose oceanography for this vessel.

Ocean/Intermediate Utilization and Projected Use

- Observatory - O&M Coastal mooring (4/site)
- Intermediate Use & Projections
- Ocean Ship Days Available - includes ARR (FOY=275 days)
- Ocean Ship Days Available - includes ARR and New Ocean Class Vessels in FOFC Plan

Regional Class >40m Utilization and Projections

Regional Class (<40m) - Utilization and Projections

Ships needed in 2020:

1 ship = 180 days

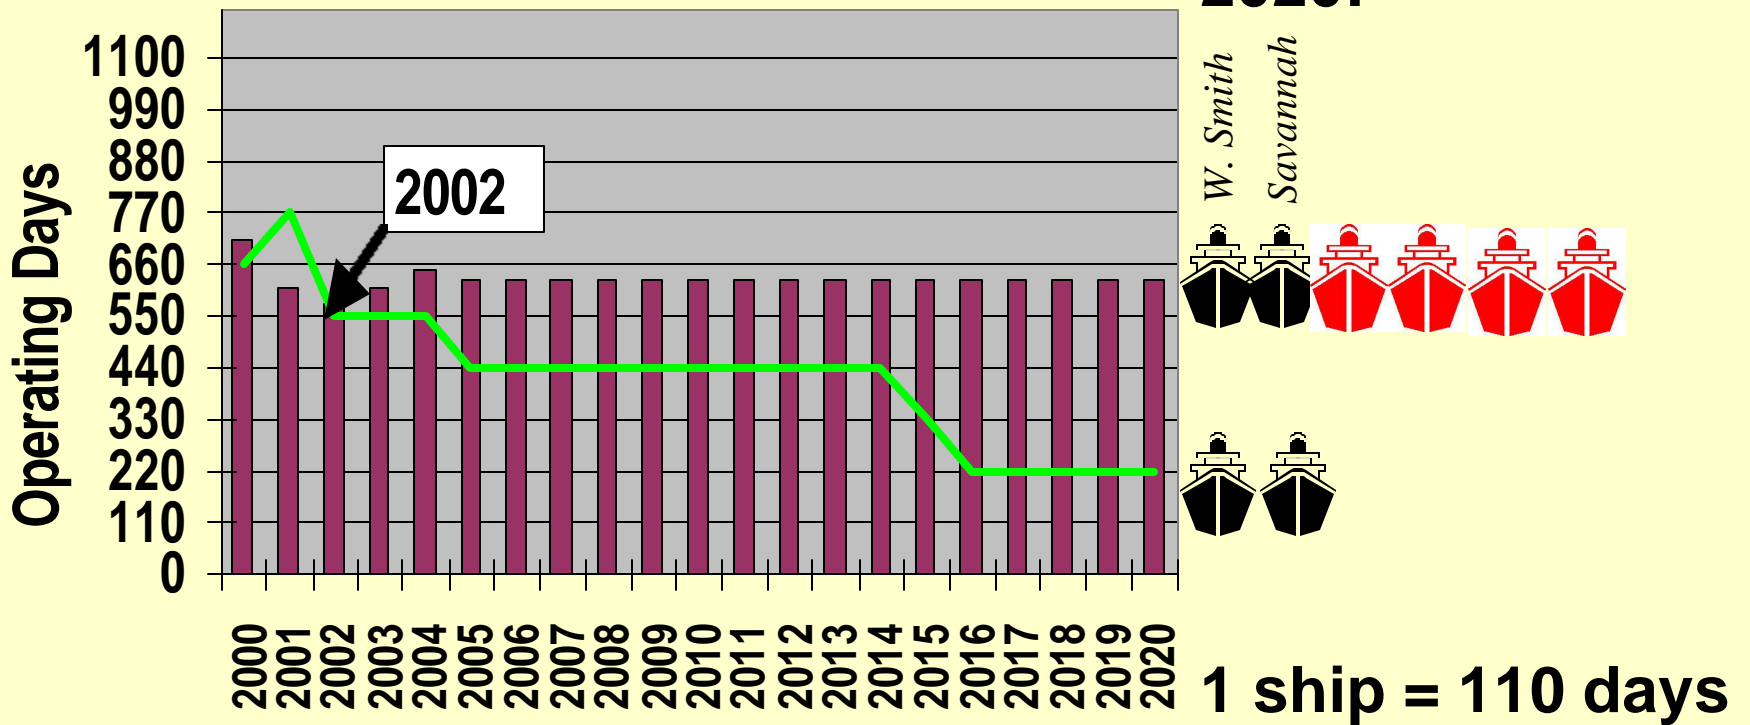

Regional (<40m) Use and Projection

Regional <40m Ship Days Available (FOY=180 days)

Local Class - Utilization and Projections

Ships needed in 2020:

In Summary...

- The current Fleet includes 27 ships. In 2020 six of our current ships will still be in operation. Assuming that the new seismic vessel, ARRV, 3 NSF Regional vessels, and the CHRV are funded, six additional ships will be available for a total of 12 ships.
- With the addition of Ocean Observatory ship time (installation and O&M), demand is expected to increase ~1000 days by 2020.
- The additional Observatory ship time represents over 40% of the current use of the Global Class:
 - This is the most expensive day-rate category
 - Observatory needs will compete with the major interdisciplinary research programs that rely on the Global Class Vessels
- Funds to support the estimated future increase in ship time have not been identified.

Summary - continued

- In 2020, a total of 21 NEW ships will be needed to meet estimated ship time demand (includes observatory ship time):
 - 5 Global ships (includes Seismic)
 - 5 Ocean Class ships (includes ARRIV)
 - 3.5 Regional Class >40m ships (includes the 3 ships to be funded by NSF)
 - 7.5 Regional and Local Ships < 40m
- The ship time projections indicate catastrophic consequences to further delays in new vessel design and construction.
