

# Office of Cutter Forces (CG-751)

## Polar Security Cutter (PSC)

- PSC 1 is scheduled for delivery in Fall 2030.
- DHS approved limited production of 8 modules in December.
- DHS approved new schedule baseline and cost estimate, enabling the program to exit breach.
- PSC operational requirements remain unchanged.

## Future Arctic Surface Capability

- CG is developing requirements for future medium icebreakers – notionally called the Arctic Security Cutter (ASC).
- ASC shall have a shallower draft than PSC for increased access to Arctic ports.
- Initial planning includes consideration of space, weight, and power for oceanographic research support missions.

## Commercially Available Polar Icebreaker (CAPI)

- CG purchased a CAPI, the M/V AIVIQ, from Offshore Surface Vessels LLC.
- Vessel will be renamed CGC *Storis* and is in the process of being crewed and prepared for operations.
- Permanent homeport will be Juneau, AK once the shoreside infrastructure is read; design and construction will take several years.
